Trigonometric Equations & Inequalities Partner Activity

Here is a focused **Black-Out Partner Practice** to help AP Precalculus students review key concepts related to **solving trigonometric equations and inequalities**. There are 24 questions in the activity, so each student has a unique set of 12 problems. When the problem is simplified completely, the student will locate their answer on the ***Black Out Sheet*** where they will record the number of their solution and then color the block in their specific color choice. When the activity is complete, all answers will be shaded and the answer sheet will Black Out.

Students should work on their individual worksheet, without the aid of a graphing calculator.

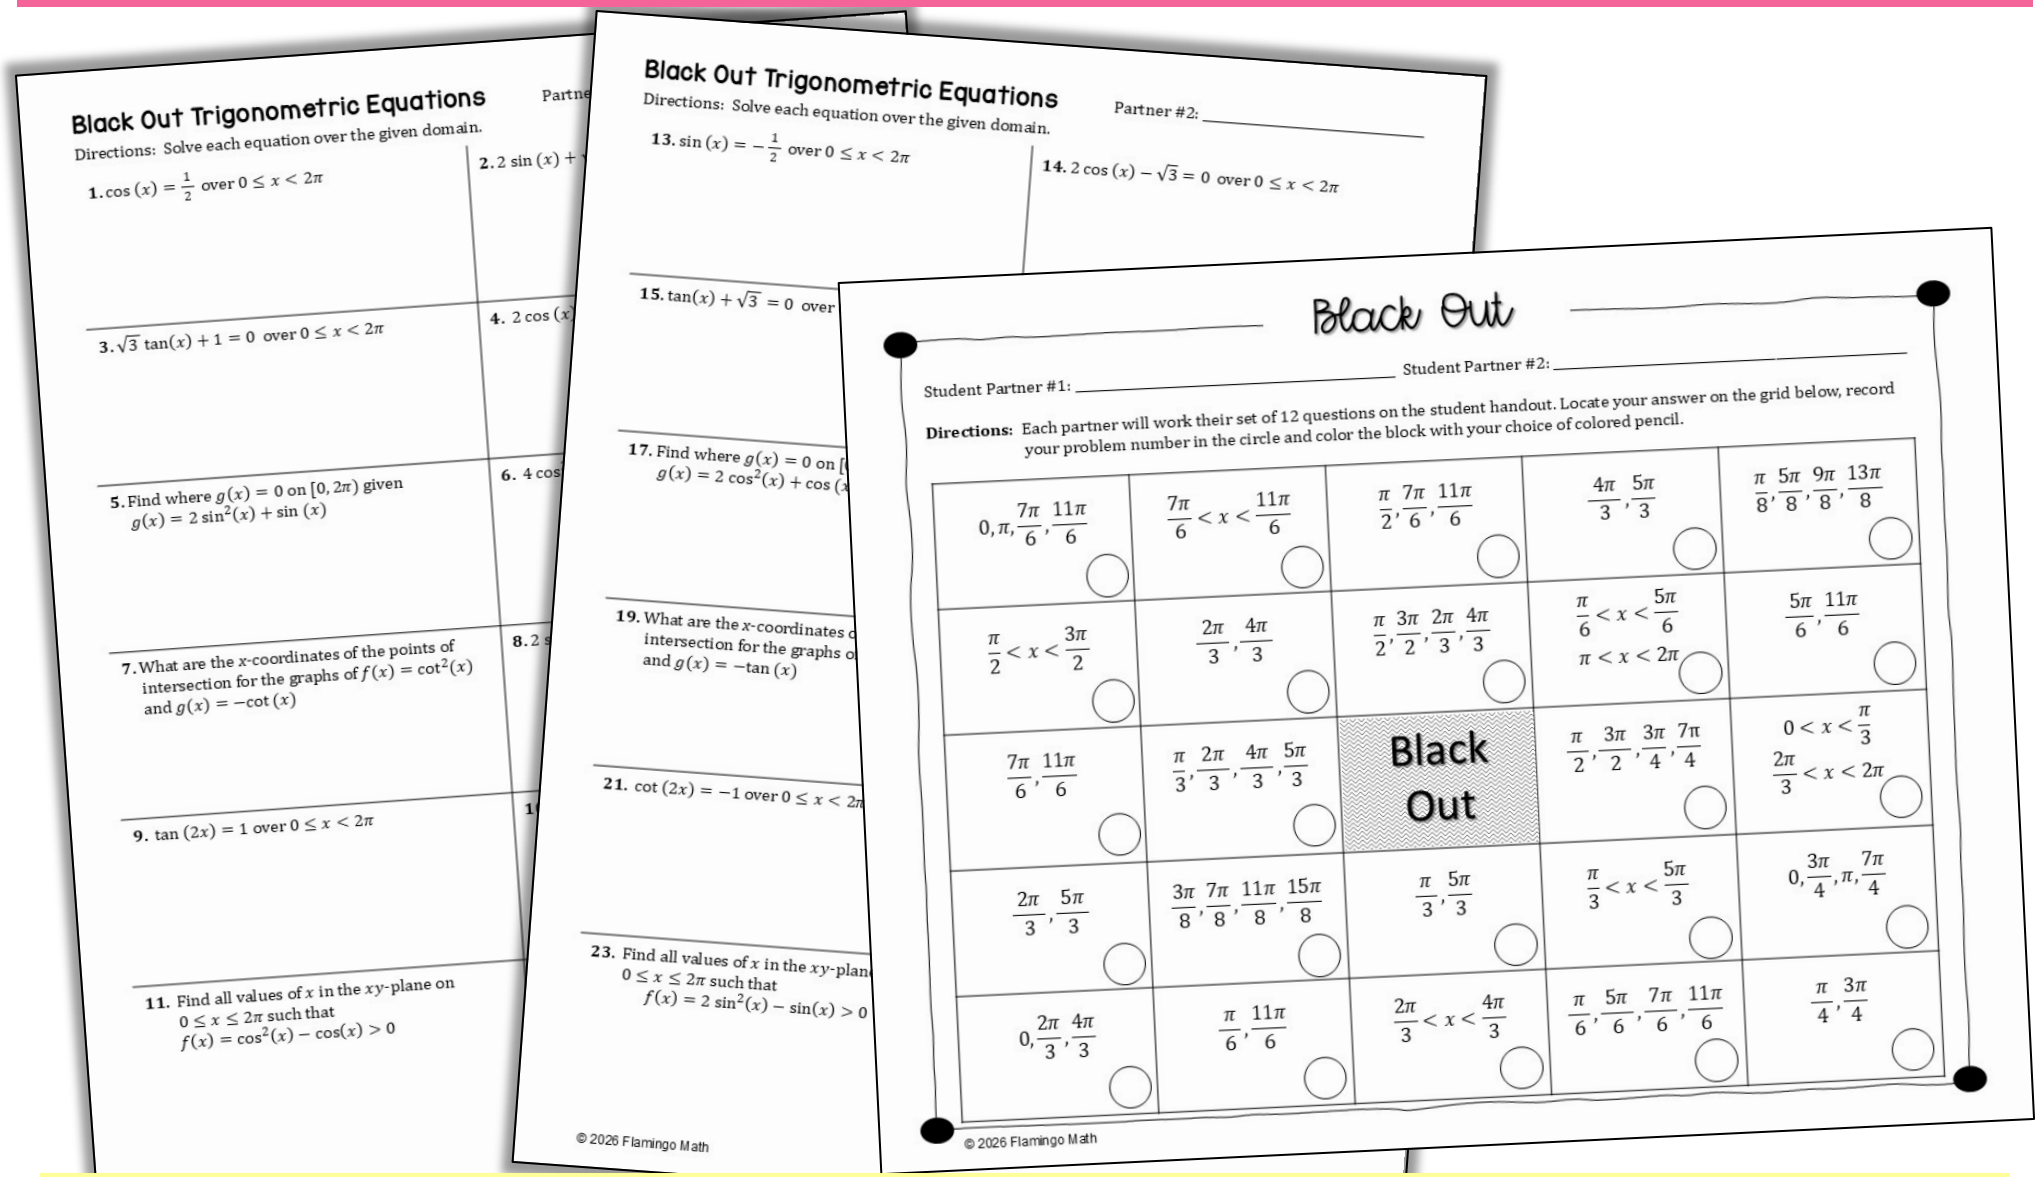

I appreciate your comments, suggestions, and ideas.
